

PP2 MEDIUM

10g	Proteose Peptone Number 2 (Difco)
1 litre	distilled water

To prepare plates:

Add 20g agar (2%) to the broth. Autoclave the media in a 2 litre Erlenmeyer flask in a bucket to catch any overflow. Cool the medium to approximately 50°C, add antibiotics in selective plates and pour. Flame each plate to remove bubbles. Dry the plates ajar and upside-down for one hour in the room. Store the plates in the original bag (taped shut) upside down at 4°C.
